EDUCATION

09/2019 – 06/2024	Stanford University Doctor of Philosophy (Ph.D.) in Chemical Engineering	California, USA
08/2014 – 05/2016	Cornell University Master of Science (M.S.) in Chemical and Biomolecular Engineering	New York, USA
08/2010 – 05/2014	University of California, Berkeley Bachelor of Science (B.S.) in Chemical & Biomolecular Engineering	California, USA

PROFESSIONAL EXPERIENCES

01/2020 – Present	Nanomaterials Science and Engineering Lab with Professor Yi Cui Stanford University <i>Graduate Student Researcher</i> (Advisor/Dissertation committees: Yi Cui, Zhenan Bao, and Jian Qin) <ul style="list-style-type: none">• Developed suspension electrolytes for high-performance lithium metal batteries• Established suspension electrolyte design platform to effectively analyze characteristics of solid-electrolyte interphases on lithium metal anodes• Revealed pivotal features and working mechanisms of inorganic solid-electrolyte interphase compounds for lithium batteries• Developed functional and electrochemically active solid electrolyte additives for lithium metal anodes• Developed a method for improving the shelf-life of electrolytes for lithium batteries• Optimized electrolyte chemistries and blends for fabricating high-performance lithium metal batteries• Screened and categorized effective electrolyte additives for lithium battery cell electrodes• Collaborated simulation analyses on evaluating interface interaction between cell electrodes and electrolytes• Screened effective inorganic nanomaterial additives for various cell electrodes	
06/2022 – 08/2022	Cell E-Chem design engineer Rivian <i>Internship</i> <ul style="list-style-type: none">• Developed facile and industry-scale lithium battery electrode evaluation and material screening protocols• Created autonomous electrochemical data evaluation scripts for the cell electrode and electrolyte analyses	
07/2016 – 07/2019	Center for Energy Storage Research Korea Institute of Science and Technology <i>Research Scientist</i> (In lieu of military service) <ul style="list-style-type: none">• Developed Langmuir-Blodgett artificial solid-electrolyte interphase coatings for lithium metal batteries• Optimized electrolyte formulations and pouch-cell designs for high-performance lithium metal batteries• Synthesized functionalized graphene, carbon nanotubes, metal-oxides, MXene, Li-intermetallic, and MoS₂ for fabricating reliable lithium metal and sulfur batteries	
08/2014 – 06/2016	Electrochemical Energy Storage Laboratory with Professor Lynden A. Archer Cornell University <i>Graduate Student Researcher</i> (Advisor: Lynden A. Archer) <ul style="list-style-type: none">• Developed Langmuir-Blodgett (layer-by-layer, large-scale, nanoparticulate, binder-free, and multi-component) coating techniques for lithium batteries• Developed separator modification strategies with diverse coating configurations and functionalized nanomaterials designed for high-performance lithium sulfur batteries	
05/2011 – 05/2014	Applied Materials & Surface Science Laboratory with Professor Roya Maboudian University of California, Berkeley <i>Undergraduate Student Researcher</i> (Advisor: Roya Maboudian) <ul style="list-style-type: none">• Developed a thin film transfer technique for flexible micro-supercapacitor electrodes• Synthesized high-voltage SiC nanowires, pseudocapacitive porous carbon thin film, and bicontinuous 3D graphene networks with controllable geometry for micro-supercapacitor electrodes• Established a pyrolysis method for fabricating porous carbon on-chip micro-supercapacitor electrodes	
12/2012 – 01/2013	Korea Electrotechnology Research Institute <i>Internship</i> <ul style="list-style-type: none">• Fabricated electrocardiography (ECG) device with a patented piezoresistive pressure sensor• Optimized polydimethylsiloxane (PDMS) thicknesses for the pressure sensor using Abaqus• Calibrated the pressure sensor based on the surrounding and contact temperatures <i>via</i> Lab View	

AWARD & RECOGNITION

- **IOP Trusted Reviewer Award**, *Demonstrating a high level of peer review competence, with the ability to critique scientific literature to an excellent standard*, Institute of Physics (IOP) (2023)
- **KIST Award**, *The highest award of KIST given to the best employee who has provided the most creative and innovative contribution to KIST's development*, Korea Institute of Science and Technology (2018)
- **John M. Prausnitz Award for Outstanding Undergraduate Research in Chemical and Biomolecular Engineering**, *Highest graduation award for the one distinguished undergraduate*, Department of Chemical & Biomolecular Engineering at UC Berkeley (2014)
- **Dean's honor list of 2013**, *Recognition from College of Chemistry Dean for outstanding academic performance*, Department of Chemical & Biomolecular Engineering at UC Berkeley (2013)
- **College of Chemistry Undergraduate Research Stipend Winner**, *Research stipend grant from College of Chemistry Department to highly selective undergraduate researchers*, Department of Chemical & Biomolecular Engineering at UC Berkeley (2013)
- **Green Chemistry Competition third-prize winner**, *Proposing most innovative ideas on Green Chemistry with \$3,000 award*, Big Ideas at Berkeley (2011)

SKILLS

Characterization

- **Cell electrodes**: Multi-probe cell electrode resistivity and interfacial resistance, Electrochemical impedance spectroscopy, Cyclic voltammetry, Scanning electron microscopy, Energy dispersive X-ray spectroscopy, Focused ion beam, beam milling, Four-point probe station, Raman spectroscopy, Brunauer-Emmett-Teller porosimeter, Thermogravimetric analysis, X-Ray diffractometer, and X-ray photoelectron spectroscopy.
- **Electrolyte**: Potentiometric Li⁺ solvation energy measurement, Ultramicroelectrode exchange current density measurement, ⁷Li & ¹⁹F nuclear magnetic resonance, Zeta potential, Contact angle goniometer, Fourier transform infrared spectroscopy, and Inductively coupled plasma atomic emission spectroscopy.
- **Surface coating**: Langmuir-Blodgett trough, Galvanostatic nanostructured electroplating, e-beam evaporator, and Ultraviolet lithography.

Material Synthesis & Method

- **Materials**: Suspension electrolytes, Langmuir-Blodgett films, functionalized graphene, amino-functionalized carbon nanotubes, sulfonated metal-oxide nanoparticles, MXene, flexible porous carbon thin-film, and Si/SiC nanowires.
- **Methods**: Modified Aurbach's Coulombic efficiency, Metal nucleation overpotential, Cryogenic transmission electron microscopy sample fabrication, Langmuir-Blodgett Scooping coating, Binder-free battery separator coatings, Air-spray coating, Carbonaceous and ceramic thin films *via* wet and dry process, Low and atmospheric pressure chemical & physical vapor deposition, Spin coating, Sulfonation and amino functionalization on nanomaterials *via* wet method, Pyrolysis, Spray pyrolysis, and Double thin film transfer.

Software

- HIOKI RM2610, Maccor, Arbin, Land, Matlab, Adobe Illustrator, Igor pro, LabView, and Advanced Excel.

GRANT APPLICATIONS

- **Lithium-metal based 260 Wh kg⁻¹ next-generation battery core technology, cell and pack-level development**

Role: Cowrote the grant proposal with Dr. Won Il Cho and won the grant

Institution: Korea Institute of Science and Technology

Client: Huge Science R&D Project Republic of Korea

Amount: \$1,340,482.57 USD

Duration: October 2016 – August 2019

Status: Successfully completed

- **Development of ship energy storage system degradation and life prediction technology**

Role: Cowrote the grant proposal with Dr. Won Il Cho and won the grant

Institution: Korea Institute of Science and Technology

Client: Energy Technology Development Republic of Korea

Amount: \$464,700.63 USD

Duration: June 2016 – December 2018

Status: Successfully completed

- **New Li-S battery core technology and pouch cell development**

Role: Participated in the grant proposal writing and won the grant

Institution: Korea Institute of Science and Technology

Client: Future Source Green City Technology R&D Project Republic of Korea

Amount: \$2,915,102.77 USD

Duration: Jan 2016 – December 2018

Status: Successfully completed

JOURNAL REVIEWER

Science Advances, Advanced Materials, Advanced Energy Materials, ACS Nano, Advanced Materials Interfaces, Materials Today Energy, Small, ACS Applied Materials & Interfaces, Science Bulletin, Journal of The Electrochemical Society, and Carbon

TEACHING EXPERIENCE

Teaching Assistance: Polymer Chemistry CHEMENG 464, Stanford University (Winter 2023)

Selected feedback:

“Always willing to help and explain concepts from the ground up, allowing me to understand the complexities of different pathways”

“He is very friendly and tries to help people. He acknowledges when he doesn't know an answer right away”

“Very helpful TA, truly does care about the students learning”

“He was a very nice TA. He was answering my questions very quickly and effectively”

“He did a great job of explaining the chemistry behind the homework synthesis papers”

“Simple explanations of complicated topics”

“Articulate, knowledgeable, respectful”

“Approachable Friendly Detailed”

Teaching Assistance: Solid structures and properties of polymers CHEMENG 469, Stanford University (Autumn 2021)

Selected feedback:

“He did a great job of taking care of logistical aspects of the course and helping everything run smoothly”

“He was very helpful with understanding problem sets”

“He helped my friend solve the homework, so she was able to help me solve the homework. He was always in class, always responsive, and helped the class logistics run smoothly”

“1) Timeliness - feedback for our work was returned quickly 2) Communication with the class via Canvas 3)

Assistance during lab demonstration”

“Dedication to helping on psets”

PRESENTATIONS

- **M.S. Kim**, “Suspension Electrolytes for Lithium Metal Batteries”, *Stanford University Chemical Engineering Convocation Distinguished Student Speaker*, September 2023. (Oral)

- **M.S. Kim**, “Amino Functionalized Multi-walled Carbon Nanotube Framework as Stable Artificial Solid-Electrolyte Interphase for Lithium Metal Anode”, *17th Autumn Korea Electrochemical Society*, October 2017. (Poster)
- **M.S. Kim**, “Langmuir-Blodgett Artificial Solid Electrolyte Interphase layer for Lithium Metal Batteries”, *The 9th Asian Conference on Electrochemical Power Sources*, August 2017. (Poster)
- **M.S. Kim**, “Developing 260 Wh kg⁻¹ Lithium-metal based battery technology, cell, and pack-level”, *The Society for Aerospace System Engineering*, April 2017. (Oral)

ACTIVITIES

- 2020 - Present **Battery Journal Club, Member**
•Discussing battery-related research with students at Stanford and UC Berkeley
- 2019 - Present **Roman Catholic Community, Member**
•Roman Catholic member at the Church of Nativity, Menlo Park, CA
- 2016 - 2019 **Agape Youth Group, Alter server**
•Roman Catholic fellowship for young Catholics
- 2014 - 2016 **CCCC, Cornell University, Member**
•Roman Catholic fellowship for Korean and Korean-American students who strive to build a community of support in strengthening their faith in God
- 2012 - 2014 **Sigma Alpha Lambda, UC Berkeley, National Member**
•Promotes academic excellence and leadership
- 2011 - 2014 **American Institute of Chemical Engineers (AIChE), UC Berkeley, National Member**
•National organization that serves to foster excellence in chemical engineering education and global practice, and to create networking opportunities with professional members in the industry and academia
- 2010 - 2014 **Chun Jin Am, UC Berkeley, Planning Committee Member**
•Roman Catholic fellowship for Korean and Korean-American students who strive to build a community of support in strengthening their faith in God
